+91-8660494224 | sindhu.patil224@gmail.com | linkedin.com/in/sindhu-patil | Bengaluru, Karnataka, India

SUMMARY

Motivated Information Science Engineering fresher with a strong foundation in Python, Java, SQL, and core software development concepts. Hands-on experience building desktop applications, database-driven systems, and AI-powered web applications through academic projects. Skilled in applying OOP principles, writing clean and maintainable code, and designing structured solutions to real-world problems. Eager to contribute as a Software Engineer Trainee and grow across the full software development lifecycle.

EDUCATION

Presidency University

Bachelor of Technology in Information Science and Engineering | CGPA: 8.05/10.0

Bengaluru, Karnataka

Aug 2022 – Present

Sri Guru Resi PU College

Pre-University (PCMB) | Percentage: 89.17%

Kalaburagi, Karnataka

2020 – 2022

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

Web & Backend Development: Flask (routing, session management), HTML, CSS, JavaScript, React (Basics), SQLite

UI/UX Tools: Figma (Beginner), Wireframing, Prototyping

Software Engineering: Object-Oriented Programming, Version Control (Git), Linux(Basics)

AI & Machine Learning: Supervised Learning, SVM, Classification, Time Series Forecasting (ARIMA, Prophet), Feature Engineering, Image Processing

Soft Skills: Problem Solving, Analytical Thinking, Communication, Team Collaboration, Adaptability

PROJECTS

AI-Based Farmer Query & Advisory System | Flask, Python, Ollama, SQLite

Apr 2026

- Designed and developed a full-stack web application using Flask, implementing routing, session handling, and modular backend architecture.
- Integrated a local LLM via Ollama to generate AI-driven recommendations including pest identification, treatment suggestions, and dosage guidance.
- Implemented plant disease detection using wavelet transform for feature extraction combined with a trained ML classification model.
- Built multilingual support for 12+ Indian languages and voice input to improve accessibility; used SQLite for persistent data storage and query history.
- Designed a farmer-friendly UI with features including market insights and advisory history, demonstrating end-to-end product thinking.

Library Management System | Java, MySQL, JDBC

Aug 2025

- Built a console-based library management system in Java to handle book issuing, returning, member registration, and inventory tracking.
- Designed a normalized MySQL database schema with tables for books, members, and transactions, ensuring data integrity via foreign key constraints.
- Implemented features including book search by title/author/genre, fine calculation for overdue returns, and automated availability updates.
- Applied core OOP principles — encapsulation, inheritance, and abstraction — to organize the codebase into clean, reusable classes.

Handwritten Character Recognition System | Python, SVM, OpenCV, Scikit-learn

Feb 2025

- Built an ML-based OCR system using SVM achieving 94% accuracy on the MNIST dataset (10,000 samples); extended to 26-character EMNIST recognition with 89% accuracy.
- Implemented a preprocessing pipeline with image normalization, noise reduction, and HOG feature extraction, improving baseline model performance by 18%.
- Applied grid search cross-validation for SVM hyperparameter tuning; produced confusion matrices and performance metrics for technical presentation.
